

What you need:

- Computer with Internet
- a printer (possibly)
- dominos in different colours

Durchführung:

1. Visit the following page: <http://www.sprites-resource.com/>
2. Search for a character you would like to build. Attention: Just choose pictures that are as big as the ones shown in the image here. Then, save your character picture using the right mouse button (the image shows how to save the picture using the German version of Firefox).
3. Open the saved picture and set the zoom to maximum. The character should now be as huge as your screen.
4. Now, one pixel stands for a domino. You can now start building the character pixel by pixel.
5. To make it easier for the dominos to topple, just build a small field around your character.

Have fun rebuilding it!
